

Cryo Characterization Report (CCR)

Lot Overview			
Qualification	Catalog Number	Quantity	Passage Number
Cryopreserved human liver non-parenchymal cells	HUCNP	1.0x10 ⁶ viable cells/vial	0

Donor Demographics								
Sex	Race	Age	BMI	Tobacco Use	Alcohol Use	Drug Use	Serological Data	Cause of Death
Female	Hispanic	43	27.3	No	Social	No	Negative	Intracranial hemorrhage

Additional donor demographic information, including relevant medical and medication history, is available upon request

Each lot of primary cells is tested found non-reactive to HIV-1, HIV-2, HTLV I, HTLV II, Hepatitis B, Hepatitis C Syphilis and CMV. However, no known test can offer complete assurance that these infectious agents are not present. Since we cannot test all the pathogens, please treat the culture as a potential infectious reagent at Biosafety Level 2 or higher. Human hepatic non-parenchymal cells are cultured in DMEM/F12 containing 10% FBS and antibiotics. FACs analysis is shown below for P1 culture:

					
Negative Control	Desmin	CD45	Smooth Muscle Alpha Actin	Negative Control	Vimentin
0% Positive	78.6% Positive	4.4% Positive	97.9% Positive	0% Positive	98.7% Positive

Contact customer service to place an order or to obtain additional information on any of our lots. This may include supplementary donor demographic information, current inventory, and photomicrographs at multiple timepoints and magnifications.
